

Partners in Motion: Helping Parkinson's Patients Through Smart Medication Management

Parkinson's Disease Drugs

- Carbidopa/Levodopa
- Dopamine Agonist
- COMT Inhibitors
- Dopamine Reuptake Inhibitors
- MAO-B Inhibitors
- Anticholinergics
- Alpha and Beta Agonist

Why Pharmacists are important in this patient population

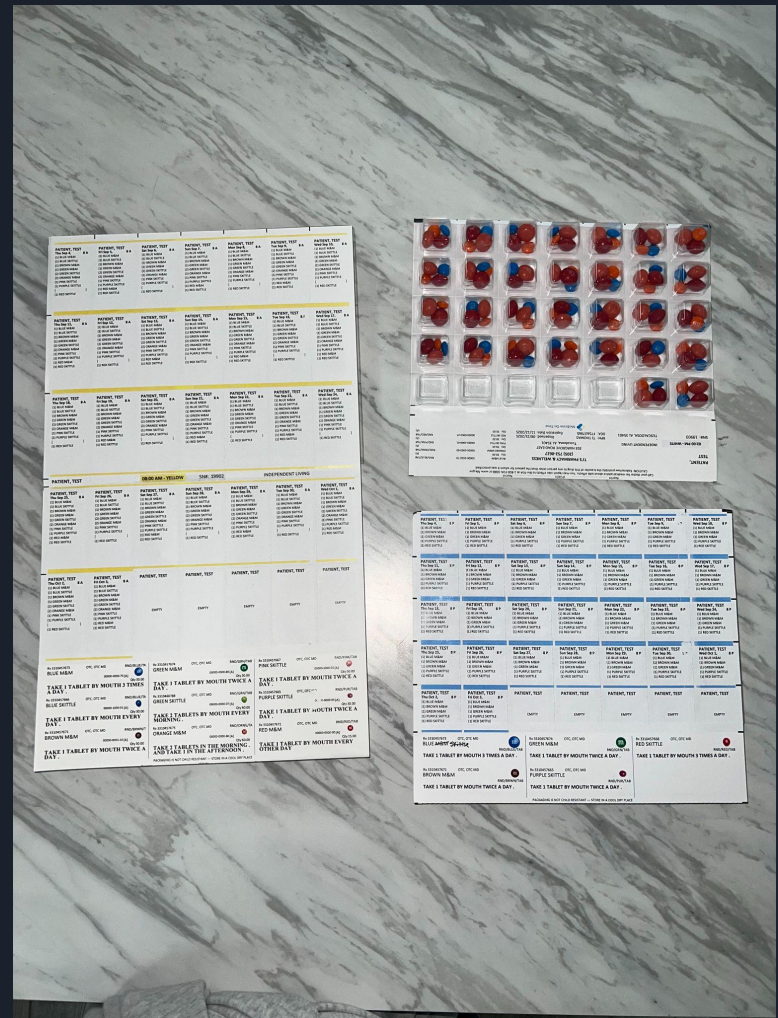

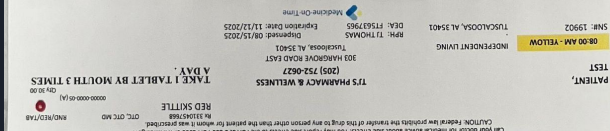

- These patients take many medications, with multiple times per day dosing. It is also important to closely manage the timing of these medications to limit “off” periods and how long they last.
- Can have significant side effects or drug interactions that need to be managed
- Pharmacists are normally the easiest to get in touch with when there are questions or problems with medications.
- We can also help optimize the med regimen in multiple ways.

MEDICINE ON TIME

Advantages of Compliance Packaging

- No longer having to organize your medications into a pill planner
- We handle contacting your doctor when you need refills
- Color coded with an easy to read calendar layout
- The date and time is on each individual dose to help remind the patient if they have taken their medicine or not for the day/dosage time. This prevents taking double doses or skipping doses
